

## Shoulder Pathway (V9) – 16.07.2019

### SELF-CARE AND SELF-MANAGEMENT

Integrated MSK Service Website: <https://sussexmskpartnershipcentral.co.uk/>

### OUTCOME MEASURES

- MSK-HQ
- Oxford Shoulder Score

| Referral reason / Patient presentation   | Traumatic shoulder pain<br>Diagnostics (AP and axillary view for X-Ray requests) |
|--|--|
|  | Traumatic shoulder pain<br>Suspected fracture                                    |
| Primary Care Management (including Assessment and Diagnostics)   | X-Ray and refer to # clinic  |
| Thresholds for Primary Care to initiate a referral   | N/A  |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | N/A  |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | N/A  |
| Thresholds for referral to Specialist In-patient care<br><i>(Choice)</i>                                 | N/A  |
| Management pathway for Specialist In-patient care  | N/A  |

| Referral reason / Patient presentation   | Traumatic shoulder pain Dislocations (Glenohumeral)             |
|--|---|
| Primary Care Management (including Assessment and Diagnostics)   | A/E if not reduced or X-Ray to exclude dislocation if suspected |
| Thresholds for Primary Care to initiate a referral   | N/A   |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | N/A   |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | N/A   |
| Thresholds for referral to Specialist In-patient care (Choice)   | N/A   |
| Management pathway for Specialist In-patient care  | N/A   |

| Referral reason / Patient presentation   | Traumatic shoulder pain Dislocation 1 <sup>st</sup> time  |
|--|---|
| Primary Care Management (including Assessment and Diagnostics)   | <p><b>Assessment:</b> history - mechanism of onset, location of pain, shoulder examination. No diagnostic required, A/E if not reduced, For young traumatic dislocators follow BESS guidance:<br/> <a href="https://www.boa.ac.uk/wp-content/uploads/2016/11/Traumatic-Anterior-Instability.pdf">https://www.boa.ac.uk/wp-content/uploads/2016/11/Traumatic-Anterior-Instability.pdf</a></p> <p><b>Management:</b> urgent referral to physiotherapy<br/> Low threshold for onward referral to iCATS from physio as per BESS guidance.</p> |
| Thresholds for Primary Care to initiate a referral   | For young traumatic dislocators -urgent referral to physio from the virtual fracture clinic. Fracture clinic or A/E. Low threshold for onward referral to iCATS from physio as per BESS guidance.<br><a href="https://www.boa.ac.uk/wp-content/uploads/2016/11/Traumatic-Anterior-Instability.pdf">https://www.boa.ac.uk/wp-content/uploads/2016/11/Traumatic-Anterior-Instability.pdf</a>  |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Assessment and examination - exclude # or cuff pathology<br>X-ray if suspected unreduced dislocation<br>Consider MRI scan for traumatic dislocators with suspected structural or cuff pathology   |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | If considering surgical stabilisation and/or opinion, refer to a co-located clinic or secondary care.   |
| Thresholds for referral to Specialist In-patient care (Choice)   | Offer patient choice of provider if patient needs and wants surgery and is fit for surgery<br>Arthroscopic shoulder stabilisation.  |
| Management pathway for Specialist In-patient care  | <br>Anterior Stabilisation of the shoulder - risk   |

| Referral reason / Patient presentation   | Traumatic shoulder pain<br>Recurrent dislocation / instability secondary to trauma   |
|--|--|
| Primary Care Management (including Assessment and Diagnostics)   | <b>Assessment:</b> history - mechanism of onset, location of pain, shoulder examination. No diagnostic at this stage.<br><b>Management:</b> If no significant loss of function consider: - pain relief in line with agreed formularies /guidance. Patient education/exercise sheet. (Do we have a link? At A&E)<br>Activity modification. Advise if increase in pain / sudden loss of movement to return to their GP. Routine referral to physiotherapy, if not previously tried |
| Thresholds for Primary Care to initiate a referral   | Routine referral to iCATs if symptoms persist following 3 months physiotherapy rehab   |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Consider MRI scan for ongoing symptoms of instability of traumatic origin. Suspected structural pathology e.g. SLAP, Bankart   |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | If considering surgical stabilisation and/or opinion, refer to a co-located clinic.  |
| Thresholds for referral to Specialist In-patient care (Choice)   | Arthroscopic shoulder stabilisation.<br><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-anterior-stabilisation.docx">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-anterior-stabilisation.docx</a>  |
| Management pathway for Specialist In-patient care  |  |

| Referral reason / Patient presentation   | Traumatic shoulder pain<br>ACJ Subluxation / Pain  |
|--|--|
| Primary Care Management (including Assessment and Diagnostics)   | <b>Assessment:</b> history - mechanism of onset, focal location of pain over ACJ, examination. X-ray – see classification of ACJ injuries<br><a href="https://www.shoulderdoc.co.uk/article/60">https://www.shoulderdoc.co.uk/article/60</a><br><b>Management:</b> Pain relief in line with agreed formularies /guidance. Patient education/exercise sheet. Activity modification. Advise if pain increases / sudden loss of movement to return to their GP.<br>Traumatic ACJ: Type I-IV Physio if symptoms persist beyond 6/52 T<br>Grade V/ VI – if open injury – red flag urgent secondary care |
| Thresholds for Primary Care to initiate a referral   | Urgent referral to physiotherapy, if significant pain and functional impairment persists post 6 weeks  |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | If symptoms persist beyond 3 months, assessment to determine injection vs surgical opinion.<br>If considering an injection (1st injection - unguided in clinic. Consider USGI for 2 nd injection).<br>Consider orthopaedic review if injection fails and symptoms are persistent   |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | Type 3 and above for surgical opinion for ongoing symptoms of pain and/or instability.   |
| Thresholds for referral to Specialist In-patient care (Choice)   | Arthroscopic distal clavicle excision or Arthroscopic ACJ stabilisation.<br><br>ACJ excision.docx  |

|   |     |
|---|-----|
| Management pathway for Specialist In-patient care | N/A |
|---|-----|

| Referral reason / Patient presentation   | Traumatic shoulder pain<br>Rotator cuff tear  |
|--|---|
| Primary Care Management (including Assessment and Diagnostics)   | <p><b>Assessment:</b> history - mechanism of onset, focal location of pain over ACJ, examination. No diagnostic.</p> <p><b>Management:</b> If no significant loss of function or strength consider: -pain relief in line with agreed formularies /guidance. Patient education/exercise sheet. Activity modification. Advise if pain increase / sudden loss of movement to return to their GP.</p> <p>Acute traumatic cuff tear - Urgent referral to iCATS within 2/52 if c/o significant loss of strength and function especially for under 60 age group.</p> <p>Chronic traumatic cuff tear: No diagnostic needed</p> <p>Management: refer for physiotherapy if symptoms persist beyond 6/62</p> |
| Thresholds for Primary Care to initiate a referral   | Urgent referral to iCATS within 2/52 if c/o significant loss of strength and function.<br>If strength and function maintained but symptoms persist beyond 4 weeks, refer to physiotherapy.  |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Consider investigations (USS and XR) if symptoms persist despite physio.  |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | Based on the level of symptoms and scan results, refer for surgical opinion through SDM process.  |
| Thresholds for referral to Specialist In-patient care (Choice)   | <p>Arthroscopic/open Rotator Cuff repair.</p> <p>Risk / Benefit information<br/>Rotator Cuff Repair<br/><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-Rotator-Cuff-Tendon-Repair-Shoulder.pdf">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-Rotator-Cuff-Tendon-Repair-Shoulder.pdf</a></p> <p>Secondary Care surgical guidelines<br/><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-rotator-cuff-repair.pdf">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-rotator-cuff-repair.pdf</a></p>   |
| Management pathway for Specialist In-patient care  |   |

| Referral reason / Patient presentation  | Shoulder pain<br>Non-traumatic  |
|---|---|
|   | <b>Shoulder pain – Non-traumatic<br/>Subacromial pain +/- calcific tendinopathy and/or Acromioclavicular joint pain</b>   |
| <b>Primary Care Management (including Assessment and Diagnostics)</b>                                     | <p><b>Assessment:</b> history - mechanism of onset, location of pain - characteristically lateral upper arm for SAP and focally over ACJ for ACJ pain, shoulder examination – may have positive impingement signs for subacromial pain or positive scarf test for aCJ pain<br/>No diagnostic at this stage.<br/>Red-flag consider referred pain and intrathoracic/ somatic sources of pain</p> <p><b>Management:</b> Pain relief in line with agreed formularies /guidance. Patient education/exercise sheet.<br/><a href="http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161125-Subacromial-pain-V5.pdf">http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161125-Subacromial-pain-V5.pdf</a><br/>Activity modification. Advise if pain increase / sudden loss of movement to return to their GP. Consider sub-acromial injection for ongoing pain.</p>   |
| <b>Thresholds for Primary Care to initiate a referral</b>   | <p>&gt; 6 weeks of symptoms, refer to physio.<br/>Referral to ICATs for patients that have had unsuccessful physio for 3 months and unguided injection or refer into MSK service for injection</p>  |
| <b>Management Pathway for the Integrated MSK Service<br/>Outcome tools: MSK HQ, Oxford Shoulder score</b> | <p>Ongoing symptoms despite physio.<br/>Consider unguided injection.<br/>Consider x-ray if unsuccessful injection to identify bony pathology / calcification.<br/>Consider ultrasound guided injection if unguided unsuccessful.<br/>Outcome measures OSS</p>   |
| <b>Management within co-located clinic (seen by an AP with a consultant present) or secondary care</b>    | <p>Based on the level of symptoms and scan results, refer for surgical opinion through SDM process.</p>   |
| <b>Thresholds for referral to Specialist In-patient care (Choice)</b>                                     | <p>Offer patient choice of provider if patient needs and wants surgery and is fit for surgery<br/>Arthroscopic decompression.</p> <p>Risk / benefit information<br/><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-Arthroscopic-Sub-acromial-Decompression-ASAD.pdf">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-Arthroscopic-Sub-acromial-Decompression-ASAD.pdf</a></p> <p>Secondary care surgical guidelines<br/>Subacromial Decompression<br/><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SAD.docx">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SAD.docx</a></p> <p>Distal clavicular excision secondary care surgical guidelines<br/>ACJ Excision<br/><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-ACJ.pdf">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-ACJ.pdf</a></p> |
| <b>Management pathway for Specialist In-patient care</b>  | <p>N/A</p>  |

| Referral reason / Patient presentation   | Shoulder pain – Non-traumatic<br>Cuff tear (degenerative) non-traumatic   |
|--|---|
| Primary Care Management (including Assessment and Diagnostics)   | <p><b>Assessment:</b> history - mechanism of onset, location of pain. Shoulder examination. Possible muscle wasting in rotator cuff. No diagnostic at this stage.</p> <p><b>Management:</b> Pain relief in line with agreed formularies /guidance. Patient education/exercise sheet. Activity modification. Advise if pain increase / sudden loss of movement to return to their GP. Consider sub-acromial injection for ongoing pain.</p> <p><a href="http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161125-Subacromial-pain-V5.pdf">http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161125-Subacromial-pain-V5.pdf</a></p> |
| Thresholds for Primary Care to initiate a referral   | > 6 weeks of symptoms, refer to physio.<br>Referral to ICATs for patients that have had unsuccessful physio. If significant loss of function / weakness +/- pain, refer iCATS earlier.  |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Consider investigations (USS or MRI and XR) if symptoms persist despite physio. Exclude other sources for weakness /pathology with imaging (clinically determined). If degenerative cuff confirmed, possible re-referral to physio, +/- unguided injection. Consider guided injection if unguided unsuccessful.   |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | Based on the level of symptoms and scan results, refer for surgical opinion through SDM process.  |
| Thresholds for referral to Specialist In-patient care (Choice)   | <p>Arthroscopic/open Rotator Cuff repair +/- ASAD.</p> <p><br/>Rotator cuff repair.docx</p> <p>Reverse shoulder replacement for cuff arthropathy.</p> <p><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-Shoulder-Replacement.pdf">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-Shoulder-Replacement.pdf</a></p>  |
| Management pathway for Specialist In-patient care  | N/A   |

| Referral reason / Patient presentation   | Shoulder pain – Non-traumatic<br>Frozen Shoulder  |
|--|---|
| Primary Care Management (including Assessment and Diagnostics)   | <p><b>Assessment:</b> history - mechanism of onset, location of pain - often diffuse shoulder pain,. Shoulder examination. Characteristically reduced passive GHJ ER, and true abduction. Common in diabetes.</p> <p><b>Management:</b> Pain relief in line with agreed formularies /guidance. Patient education/exercise sheet. Activity modification. Consider routine referral to physiotherapy.</p> <p><a href="http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161124-Frozen-Shoulder.pdf">http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161124-Frozen-Shoulder.pdf</a></p> <p><a href="http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/12/161125-Frozen-Shoulder-Exercise-sheet.pdf">http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/12/161125-Frozen-Shoulder-Exercise-sheet.pdf</a></p> |
| Thresholds for Primary Care to initiate a referral   | Significant pain / not coping with symptoms at 6 weeks.   |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Diagnostics at the point of triage (x-ray) to exclude GHJ arthropathy. Consider unguided injection. Consider image guided 2nd injection. Consider re-referral to physio for dominant picture of stiffness. Consider onward referral for hydrodilatation and/or surgical opinion of persistent symptoms with acopia.   |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | Based on the level of symptoms and scan results, refer for surgical opinion through SDM process.  |

|   |  |
|---|--|
| <b>Thresholds for referral to Specialist In-patient care (Choice)</b> | Hydrodilatation. Arthroscopic release. |
| <b>Management pathway for Specialist In-patient care</b>              |  |

| <b>Referral reason / Patient presentation</b>   | <b>Shoulder pain – Non-traumatic Osteoarthritis</b>   |
|---|---|
| <b>Primary Care Management (including Assessment and Diagnostics)</b>   | If a systemic source is suspected, consider Rheumatology referral. Assessment: age, morning stiffness and GHJ restriction into ER. Possible joint crepitus.<br>Pain relief in line with agreed formularies /guidance. Patient education/exercise sheet. Activity modification.<br><b>Management:</b><br><a href="http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161124-Oesteoarthritis-of-the-Shoulder.pdf">http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161124-Oesteoarthritis-of-the-Shoulder.pdf</a> |
| <b>Thresholds for Primary Care to initiate a referral</b>   | > 6 weeks, referral to physio. Referral to iCATS with severe pain, crepitus and loss of function not responding to rehab.   |
| <b>Management Pathway for the Integrated MSK Service</b><br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Initiate diagnostics at the point of triage (x-ray). Consider injection for non-surgical patients / early OA symptoms if indicated. Consider guided injection if unguided unsuccessful.   |
| <b>Management within co-located clinic (seen by an AP with a consultant present) or secondary care</b>          | Based on the level of symptoms and x-ray results, refer for surgical opinion through SDM process.   |
| <b>Thresholds for referral to Specialist In-patient care (Choice)</b>   | Total joint replacement or reverse shoulder replacement. Hemiarthroplasty.<br><br>Shoulder replacement.docx   |
| <b>Management pathway for Specialist In-patient care</b>  | Secondary case surgical guidelines for shoulder replacement<br><a href="https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-Shoulder-Replacement.pdf">https://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2019/11/SE-SC-Shoulder-Replacement.pdf</a>  |

| <b>Referral reason / Patient presentation</b>   | <b>Shoulder pain – Non-traumatic Habitual subluxation / instability</b>  |
|---|--|
| <b>Primary Care Management (including Assessment and Diagnostics)</b>   | <b>Assessment:</b> history - mechanism of onset, location of pain, examination. No diagnostic at this stage.<br>Pain relief in line with agreed formularies /guidance. Patient education/exercise sheet. Activity modification.<br>Refer to physio as soon as problem is identified or if unsure of diagnosis<br><a href="http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161125-Shoulder-instability-V5.pdf">http://sussexmskpartnershipcentral.co.uk/wp-content/uploads/2016/11/161125-Shoulder-instability-V5.pdf</a> |
| <b>Thresholds for Primary Care to initiate a referral</b>   | Refer to physio as soon as problem is identified.  |
| <b>Management Pathway for the Integrated MSK Service</b><br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Seek secondary care opinion if symptoms persist despite long-term condition specific rehab.  |
| <b>Management within co-located clinic (seen by an AP with a consultant present) or secondary care</b>          | N/A  |

|   |     |
|---|-----|
| Thresholds for referral to Specialist In-patient care<br>(Choice) | N/A |
| Management pathway for Specialist In-patient care                 | N/A |

| Referral reason / Patient presentation   | Shoulder pain – Non-traumatic<br>Biceps rupture (long head)<br>For distal biceps rupture see elbow section below  |
|--|---|
| Primary Care Management (including Assessment and Diagnostics)   | <p><b>Assessment:</b> history - mechanism of onset, location of pain, characteristically anterior upper arm. Shoulder examination. Possible popeye sign. No diagnostic at this stage.</p> <p><b>Management:</b> Patient education and information<br/>Reassure if no pain or loss of function<br/>If pain / SAP– follow SAP pathway<br/>If suspected cuff tear – follow cuff tear pathway</p> |
| Thresholds for Primary Care to initiate a referral   | Refer to physio with 6 weeks or more of symptoms  |
| Management Pathway for the Integrated MSK Service<br><i>Outcome tools: MSK HQ, Oxford Shoulder score</i> | Consider investigations (USS/MRI) for persistent symptoms. Consider unguided injection or guided if unguided unsuccessful.  |
| Management within co-located clinic (seen by an AP with a consultant present) or secondary care          | Consider secondary care opinion for persistent symptoms in the location of the bicipital groove for consideration of a tenotomy or tenodesis.   |
| Thresholds for referral to Specialist In-patient care<br>(Choice)  | N/A   |
| Management pathway for Specialist In-patient care  | N/A   |
